Summary

Data scientist and ML researcher focused on model evaluation, reliability, and operational analytics. Hands-on LLM safety evaluation, Python/PyTorch modeling, SQL/Azure pipelines, monitoring systems, experimentation, and stakeholder-facing analytics.

Education

University College London (UCL) - *M.Sc. Data Science and Machine Learning* London, England | *Expected Sep 2026*

- **Coursework:** Supervised Learning, Network Science, Graphical Models, Applied ML, Reinforcement Learning, Statistical NLP, Open-Endedness and General Intelligence

University of California, Berkeley - *B.A. Data Science; Business and Industrial Analytics* Berkeley, CA | *Dec 2024*

- **Coursework:** Probability & Statistics, Data Mining & Analytics, Inference, Time Series

Professional Experience

Locai Labs London, England
Research Intern Feb 2026 - Present

- Built a reliability baseline for “Sleeper Agents” in **Gemma-3-4B**, using supervised fine-tuning to evaluate robustness and 93% deception-rate persistence under code-vulnerability attack settings.
- Designed supervised false-positive and false-negative evaluation probes to distinguish benign from malicious model states, improving the evidence base for AI safety guardrails and escalation criteria.
- Evaluated **MMLU** and **HellaSwag** performance to verify whether safety interventions preserved reasoning quality within 1.7% of clean baseline performance.
- Investigated inference-time neutralization via weight orthogonalization of defection vectors, connecting interpretability findings to practical reliability controls.

Thermo Fisher Scientific Pleasanton, CA
Software Engineer Intern May 2024 - Aug 2024

- Engineered an automated monitoring and alerting pipeline with 2-minute refresh cadence, reducing operational alert latency by 15% and automating failure alerts for production metrics.
- Developed a JavaScript/Angular utility app to streamline real-time telemetry collection and system-performance analysis for operational stakeholders.

The Commons XR Remote
Data Engineer Intern Dec 2023 - Apr 2024

- Implemented **SQL/Azure ETL** pipelines for 2M+ records, reducing dashboard refresh time by 50% and accelerating stakeholder reporting workflows.
- Translated usage patterns into KPI-driven Power BI dashboards for cross-functional product and operations stakeholders, strengthening data access for recurring business reviews.

Projects

Multilingual Hallucination Detection Python, PyTorch

- Benchmarked hallucination detection across 16 translation directions using the **Minos-v1** refusal-aware classifier, aligning model-quality evaluation with regression detection for customer-facing AI systems.
- Quantified performance degradation in English-target directions caused by English-centric safety tuning and improved MCC significantly from -0.11 to +0.19 using Arabic-to-English performance references.
- Structured chain-of-thought prompting and evaluation methods to reduce classification gaps while keeping claims tied to measured performance.

Morphological Safety Control (EvoGym) - RL Safety Optimization Python, PPO, Genetic Algorithms

- Researched morphological capability control by evolving voxel-based soft robots physically incapable of unsafe tasks, using hardware constraints as a safety-by-design mechanism.
- Engineered a hybrid optimization pipeline using **Genetic Algorithms** and **PPO** to evolve safe morphologies across 5 complex task environments: Walker, Obstacle-Carrier, Climber, Manipulator, and Catcher.

Skills

Data Science & Experimentation: Statistical Modeling, Causal Inference, A/B Testing, Measurement Design, Feature Engineering, Time Series Forecasting

Machine Learning & AI: Supervised Learning, Deep Learning, Reinforcement Learning, PPO, LLM Evaluation, AI Safety, Guardrails, Model Reliability, Interpretability, Multilingual NLP

Languages & Tools: Python, SQL, Pandas, NumPy, scikit-learn, PyTorch, Azure, Power BI, Docker, Git, JavaScript, Angular

Interests: Judo (Nationally Ranked), Volleyball, Game Development, Motorsports
